Claims 1-7 are presented for examination.

The remarks filed on April 8, 2008 have been received and entered.

Claims 1-7 are rejected under 35 U.S.C. 103 (a) as being unpatentable over Mayfroy-Camine et al., Lahaye et al., Campbell et al. (6,177,419), Crapo et al. and Winkler et al. for the reasons set forth on pages 2-6 of the office action of October 19, 2007.

Applicant's arguments and remarks have been carefully considered, but are not deemed to be persuasive for the reasons set forth on pages 4-6 of the office action of October 19, 2007 and the following reasons. Applicant's arguments regarding De La Paz and Delcourt articles have been noted. Applicant in his remarks admits that both articles show the oxidative mechanism may play a role in the development of AMD. Applicant also argues that neither of these references shows the use of superoxide dismutase for the treatment of AMD. Applicant is reminded that the rejection is an obviousness rejection. The combination relied upon references, even the submitted articles by the applicant show that oxidative mechanism plays a role in development of AMD. The fact that the submitted articles by the applicant do not use superoxide dismutase for the treatment of AMD, does not overcome the relied upon reference by the examiner which shows the use of superoxide dismutase for the treatment of oxidative damage such as AMD. The fact that the articles presented by the applicant do not show that the higher level of enzyme do not correspond to the severity of AMD, does not negate the correlation between oxidative mechanism and development of AMD.
